
Would 14 sheets of 5/8" thick 4 x 10 drywall be useful?

Posted by SSullivan - 2008/08/15 14:39

I might have found this for free, leftover from a basement renovation. Would this be useful for the studio?

Or 75 square feet of metal biege tile be enough for the bathroom? Should be cheap, I'd be willing to donate it.

I also found someone selling about 30 doors, interior and exterior, various sizes in color for about \$10 a piece if you buy more than one. Let me know the sizes and I'll call him.

That's definitely enough for the bathroom and maybe even entry way. Don't pay more than .50 a square foot, though..usually home depot has crazy specials on tile, too.

get it for free! if it's free, it's for me!

Cool, I'm just waiting for the drywall lady to get back to me. If tile is easy to get for .50 a square foot maybe we'll just hold off until we're further in the build process. What about the doors? Is \$10 each cheap? Let me know the sizes and your preferred materials and I'll contact the guy.

Yeah, 5/8" drywall is the stuff we want.

\$10 per door is definitely cheap. It would be best if they were solid core (or solid wood) doors. Solid core steel would be best for the exterior doors.

I've got an unused shed behind my house that could be used to store stuff, although getting sheets of drywall into it would be impossible. Doors could go in there, for sure. I'd offer up my garage for the drywall, but I've already got 100 sheets in there.

Sean you can put whatever we need to store in my garage, now that your sofa is out of there there is plenty of room.
